User Stories assignment 2

User Story "Create the database based on the relational model"

As a: **developer**
I want to: **create a database**
So that: **the Someren application can use it for storing/retrieving information**

Checklist

- An Azure database has been created *(see manual SQL Server and Database creation manual)*;
- SQL Server Management Studio has been installed;
- All tables, columns and references (based on the relational model) has been created;

User Story "Prepare Visual Studio solution"

As a: **developer**
I want to: **prepare the Visual Studio solution**
So that: **the functionalities for the Someren application can be implemented**

Checklist

- The Someren Visual Studio project (ASP.NET MVC) has been created;
- The database connection string has been configured in the project;
- A layout for all views of the Someren web application have been defined (including a top menu);
- A Git repository has been created for the Visual Studio project;

User Story “View all students“ (variant A)

As a: **user**
I want to: **view all students**
So that: **I know which students are participating the Someren camp**

Checklist

- Test data (students) have been added to the database;
- All students are displayed in a structured way, ordered by last name;
- For each student the student number, first name, last name, telephone number and class is displayed;

User Story “Manage students” (variant A)

As a: **user**
I want to: **manage students**
So that: **I can view, add, change and delete students of the Someren camp**

Checklist

- All students are displayed in a structured way, ordered by last name;
- For each student the student number, first name, last name, telephone number and class is displayed;
- A new student can be added;
- An existing student can be changed (each field can be changed);
- An existing student can be deleted;
- All student (management) functions are accessible to the user by using links/buttons;

User Story “View all lecturers” (variant B)

As a: **user**
I want to: **view all lecturers**
So that: **I know which lecturers are participating the Someren camp**

Checklist

- Test data (lecturers) have been added to the database;
- All lecturers are displayed in a structured way, ordered by last name;
- For each lecturer the first name, last name, telephone number and age is displayed;

User Story “Manage lecturers” (variant B)

As a: **user**
I want to: **manage lecturers**
So that: **I can view, add, change and delete lecturers of the Someren camp**

Checklist

- All lecturers are displayed in a structured way, ordered by last name;
- For each lecturer the first name, last name, telephone number and age is displayed;
- A new lecturer can be added;
- An existing lecturer can be changed (each field can be changed);
- An existing lecturer can be deleted;
- All lecturer (management) functions are accessible to the user by using links/buttons;

User Story “View all rooms” (variant C)

As a: **user**
I want to: **view all rooms**
So that: **I know which rooms are used by students and which rooms are used by lecturers**

Checklist

- Test data (rooms) have been added to the database;
- All rooms are displayed in a structured way, ordered by room number;
- For each room the number, size and type (student/lecturer) is displayed;

User Story “Manage rooms” (variant C)

As a: **user**
I want to: **manage rooms**
So that: **I can view, add, change and delete rooms of the Someren camp**

Checklist

- All rooms are displayed in a structured way, ordered by room number;
- For each room the number, size and type (student/lecturer) is displayed;
- A new room can be added;
- An existing room can be changed (each field can be changed);
- An existing room can be deleted;
- All room (management) functions are accessible to the user by using links/buttons;

User Story “View all activities” (variant D)

As a: **user**
I want to: **view all activities**
So that: **I know what activities there are during the Someren camp**

Checklist

- Test data (activities) have been added to the database;
- All activities are displayed in a structured way, ordered by date/time;
- For each activity the name (soccer tournament, puzzle quest, obstacle course), start date/time and duration is displayed;

User Story “Manage activities” (variant D)

As a: **user**
I want to: **manage activities**
So that: **I can view, add, change and delete activities of the Someren camp**

Checklist

- All activities are displayed in a structured way, ordered by date/time;
- For each activity the name, start date/time and duration is displayed;
- A new activity can be added;
- An existing activity can be changed (each field can be changed);
- An existing activity can be deleted;
- All activity (management) functions are accessible to the user by using links/buttons;
